Response to Applicant's Amendment

1. The amendment filed October 6, 2004, has been entered and made of record.

The proposed drawing change is approved. Replacement drawing sheets which incorporate the changes and which comply with 37 CFR 1.84 and 37 CFR 1.121(d) must be submitted.

In response to the amendment, the objection to claim 1 are withdrawn.

The amendment and the Examiner's Amendment below satisfies the requirement to cancel the new matter entered into the application by the amendment filed January 25, 2002.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Carol Barry (Reg. No.41,600) on March 4, 2005.

The application has been amended as follows:

In the specification

In the paragraph beginning on page 10, line 4 (in the replacement paragraph submitted October 6, 2004), in line 8, replace, ", and if the other child" with --),--.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The closest prior art is U.S. Patent 4,876,728 to Roth. Regarding claim 1, Roth discloses, the expressing step (this is inherent in the image processed by Roth's invention), the establishing a scan order step (column 7, lines 7+), the establishing a run data structure step (column 22, lines 20+), the scanning step and the determining step (column 34, lines 19-49), and the populating step (column 22, lines 20+, column 34, lines 19-49). Roth renders obvious the run data structure defining a parent, child and sibling structures for storing information about the parent-child relationships and sibling relationships because although these relationships are in a blob data structure rather than in the run data structure, the run data structure contains a pointer to the blob data structure. Therefore, they are effectively or functionally equivalent to a single data structure, i.e., the run data structure. Roth does not disclose the last step of using said populated run data structure to traverse the parent-child and sibling relationships and thereby identify contours within said pixel-based image data. Instead, Roth appears to rely on classification and matching to recognize objects in the image. Claims 2-5 depend from claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
